Mallet & Measure · Full downloadable edition · October 24, 2026

Created and developed by Drew Wichman
Orff-Schulwerk certified music teacher

Open the studio in four steps

01. Extract the entire ZIP. Windows: Extract All. Mac: double-click the ZIP. Do not launch from inside a ZIP preview.

02. Keep the folder together. Move Mallet-Measure to Documents / Music Teaching, or another permanent folder you can write to.

03. Open the app. Inside Software, open **Open-Mallet-Measure.html** in your desktop browser.

04. Begin composing. Choose Compose → Sequencer or Score, then add an instrument. Click Play after entering a few notes.

Choose your starting point

I want to…	Go to…
Write with a grid	Compose → Sequencer
Write on the staff	Compose → Score → Part · compose
Record notes	Choose a part, set Grid/count-in, and press Record
Try an example	Project → Demo library → My Orf Assignment
Save editable music	Project → Download project
Print or share	Score → Print / PDF, or Export

Keep your music

Download an **.orff** file at the end of every session. Autosave and named versions belong to this browser and are not cloud backups. Save student work in its own folder, separate from Software.

Read **Mallet-Measure-User-Manual.pdf** for the complete guide. Page 2 explains what is new; page 18 walks a student through a first composition.

Updating and folder care

Keep this page handy when installing a later release.

01. In the old app, download each composition you want to keep with Project → Download project.

02. Extract the updated buyer ZIP into a new folder. Keep your previous copy until you have checked the update.

03. Open Software / Open-Mallet-Measure.html from the new folder.

04. Use Project → Open a project file… to load your saved .orff file. Listen and check its parts, then download a backup.

Leave these files together

The HTML file is a launcher, not the entire application. It needs the accompanying packed files, code, fonts, sounds, artwork, and notices. Do not move the HTML file alone, rename internal folders, or delete unfamiliar files. A shortcut to the launch file is fine; leave the real file in Software.

Good places to install

A permanent folder under **Documents** is a simple choice. A Desktop folder also works. Avoid protected system folders, temporary download locations, and cloud-only files that are not stored on the computer. Keep the previous release separate instead of replacing a few files at a time.

Device and school requirements

Use a desktop or laptop browser with speakers or headphones. A mouse and computer keyboard are enough. MIDI and video support vary by browser, operating system, and school policy; MP4 is not available on every device. Mobile and tablet use is not promised. School-managed computers may block local HTML or JavaScript: ask your technology staff if the extracted app will not open.

The app is for students and teachers

Students can compose, record, revise, and share using the same tools as the teacher. There are no student accounts or online submission portal in this edition. Use your school’s existing method to collect downloaded .orff files, PDFs, or audio.

For practical help, use the **?** button in the studio or the troubleshooting page in the manual. Third-party credits and licenses are included in the package; no setup changes are needed to read them.
